“IMMEDIATE MANAGEMENT OF THE EXTRACTION SITE”

Aims and objectives.

Update GDPs on current management of extraction sites.
Discuss the advantages and disadvantages of immediate or delayed replacement with a denture, bridge or an implant including the use of socket preservation techniques.
Inform GDPs of services for the management of severe periodontal disease including surgical management of defects and periodontal – prosthodontic multidisciplinary care.
Inform GDPs of a restorative study groups and implant mentoring.

Ken Hemmings

Ken graduated with honours in Dental Surgery from Bristol University in 1982. Junior hospitals posts followed at Bristol, Birmingham and Torquay before gaining a Registrar in Oral Surgery position at the Royal London Hospital. He gained his London fellowship in 1986 before entering the specialty of Restorative Dentistry.

Whilst studying for a two year MSc programme in Conservative Dentistry at the Eastman Dental Hospital he avoided financial destitution by working part-time as a Registrar and in general dental practice. He completed Senior Registrar training at the Eastman in 1993. He took up a full time consultant post in the departments of Conservative Dentistry and Periodontology in August 1995. He is recognised by the GDC as a specialist in Restorative Dentistry, Prosthodontics, Periodontology and Endodontics.

His research interests and publications have covered the management of tooth wear, hypodontia, tooth replacement and periodontal/restorative interactions. He has co-authored two books and last year the BSRD guidelines on crowns, fixed bridges and dental implants. He now shares his time between hospital and private practice. His wife and three children still make for a busy and fun home life. He retired from rugby coaching last year but continued swimming and cycling which resulted in triathlon competition over the last two summers.
